

Top 5 AI Coding Tools

Level up your dev workflow

Swipe to explore →

#01 GitHub Copilot

Your AI pair programmer

Autocomplete on steroids. Suggests entire functions based on context and comments.

- ✓ Writing boilerplate code fast
- ✓ Learning new frameworks
- ✓ Debugging with suggestions

Write detailed comments before coding for better suggestions

#02 ⚡ Cursor IDE

The AI-first code editor

VSCode fork with native AI. Chat with your codebase, refactor with context.

- ✓ Large codebase navigation
- ✓ Complex refactoring tasks
- ✓ Learning unfamiliar code

✨ **Switch from VSCode in 5 minutes - same extensions work**

#03 Sourcegraph Cody

Search your entire codebase

Semantic code search meets AI assistant.

Finds relevant code across repos.

- ✓ Enterprise codebases
- ✓ Multi-repo projects
- ✓ Onboarding developers

Set up repo indexing first for best results

#04 Tabnine

Privacy-focused AI completion

Runs locally, no cloud. Perfect for sensitive codebases.

- ✓ Security-conscious teams
- ✓ Offline development
- ✓ Air-gapped environments

✨ **Best choice when data can't leave your machine**

#05 Amazon CodeWhisperer

AWS-optimized completions

Free tier available. Excellent for AWS SDK and cloud patterns. 

- ✓ AWS development
- ✓ Serverless projects
- ✓ Infrastructure as Code

Integrates seamlessly with Cloud9 and JetBrains

My Setup

Stack: Cursor + Copilot + Cody

Why: Best coverage for daily work
